5. CONSTRUCTION

5.1. CASING PLACEMENT

5.1.1. Use of a casing expander or other method of placing the casing pipe in the ground shall be performed to avoid damaging the casing pipe or causing the casing to break or crack.

5.1.2. The method of construction shall meet all current area and construction standards and specifications.

5.1.3. The casing shall be placed in the ground in such a manner that it will not damage or interfere with any existing or future underground utilities or structures.

6. SEALS AND SUPPORTS

6.1. Accessibility

6.1.1. Access to the casing shall be provided at frequent intervals to allow for inspection and maintenance.

6.1.2. Access to the casing shall be provided at frequent intervals to allow for inspection and maintenance.

7. SHUT-OFF VALVES

7.1. Accessible emergency shut-off valves shall be installed on the casing pipe in accordance with the applicable area and construction standards and specifications.

8. LONGITUDINAL PIPELINES

8.1. The casing shall be placed in the ground in such a manner that it will not damage or interfere with any existing or future underground utilities or structures.

9. APPROVAL OF PLANS

9.1. The proposed placement of the casing pipe shall be submitted for review and approval in accordance with the applicable area and construction standards and specifications.

10. EXECUTION OF WORK

10.1. The execution of work on the proposed placement of the casing pipe shall be performed in accordance with the applicable area and construction standards and specifications.

NOTE: These specifications are typical and may not apply to all projects. It is important to consult the applicable area and construction standards and specifications for specific requirements and guidelines.
