Project Management Information System (PMIS)

What is PMIS?

The Program Management Information System (PMIS) is a cloud-based platform designed to oversee all aspects of project delivery. This integrated system enhances reliability and streamlines processes through workflows and automation. It offers real-time visibility and improved interactive reporting. With its user-friendly interface and secure access, the system will also serve as a collaborative platform, enabling stakeholders to manage tasks and responsibilities effectively.

PMIS Program Goals

The goals of the PMIS program are to deploy a comprehensive, integrated software solution that enhances financial reporting, aides in complex grant funding allocation reporting and dashboards. By adopting the latest project control and control management processes and procedures consistent with industry standards., we will boost efficiency and establish a solid foundation for a digital strategy.

The cloud-based system will consist of seven components, which will include:

Project Management

Grants Tracking and Management

Risk Management

Cost Management

Schedule Management

Contract Management

Progress Payment Application

Reporting and Dashboard

Project Management Information System (PMIS)

PMIS Deployment Strategy

Metrolink will collaborate with the deployment team to create a strategy for prioritizing the implementation of modules. Our team will focus on choosing pilot projects and preparing data for cleansing and migration. Additionally, we will identify program champions and super users, and appoint internal trainers for each department to ensure a streamlined and efficient process.

PMIS will:

Increase efficiency

Unlock potential cost savings

Enable complex program delivery

Establish the foundation for digital strategy

Program Success Indicators

As we pursue success across the agency, we will measure our progress using program success indicators.

Number of projects in the system

Number of contracts in the system

Number of progress payments

Increasing User base

Number of reports & dashboards

Sunset of legacy tools

Manual processes replaced

Ability to audit the system and its processes

Have a question or a comment about PMIS?
